

RideSafe- By Priti Sarkar

The AI-native safety app - a safe travel companion in today’s world.

W H Y T H I S E X I S T S

Uber, Ola, Lyft and Rapido treat safety as a hidden SOS button buried three menus deep. Female riders — especially at night — get a ride, not a companion. RideSafe rebuilds the ride around one idea: an AI Guardian that watches, warns, and acts in real time.

Capability	Uber / Ola / Rapido	RideSafe + AI
Safety surface	Hidden SOS button	Always-on Guardian FAB
Night rides	Same UX as day	Night Safety Mode + auto-share
Driver trust	Photo + rating	Live face + plate verify
Route deviation	No alert to rider	AI detects & offers actions
Emergency	Manual call to support	One-tap SOS to trusted contacts
Gender preference	Not offered	Verified female-driver priority
Assistant	Chatbot for refunds	Context-aware safety companion

AI × Safety = a ride that actively protects you

Real-time route intelligence · natural-language commands · proactive night-safety nudges · one-tap actions that turn intent into action.

RideSafe- By Priti Sarkar

RideSafe AI is an AI-powered women's ride safety platform designed to make every journey safer, smarter, and more reassuring. Unlike traditional ride-booking applications that primarily focus on transportation, RideSafe places user safety at the center of the experience by integrating intelligent safety features throughout the ride lifecycle. From booking a ride to reaching the destination, users can access capabilities such as Driver Verification, Trusted Contacts, Night Safety Mode, Route Deviation Alerts, Silent Audio Trigger, Health Mode, Community Safety Maps, and Emergency SOS. At the heart of the platform is **RideSafe Guardian AI**, a context-aware AI safety companion that understands natural language, proactively recommends safety actions, and can directly operate application features such as enabling safety modes, sharing live location, navigating to safety tools, and initiating emergency workflows. Rather than functioning as a generic chatbot, Guardian AI acts as an intelligent safety controller that helps users make informed decisions and seamlessly interact with the application, creating a more secure, trustworthy, and user-centric ride-sharing experience.

Guardian AI

The differentiator — a safety companion, not a chatbot

- Natural language: "I don't feel safe" → SOS armed
- Context-aware: knows time, route, mode state
- Executes real app actions — not conversation
- Proactive nudges tuned to your ride, not to sell you rides

Home

The entry point — safety visible from second one

- Where-to search with Book Safe Ride primary action
- Instant Night Safety + Female Driver toggles above the fold
- Live Safety layer summary — no menu diving
- Guardian AI FAB always one tap away

Home · Night Mode

The interface reshapes itself when it matters most

- Automatic dark palette after sunset
- AI proactively suggests enabling Trusted Watcher
- High-contrast SOS remains the visual anchor
- Same layout, safer defaults — zero cognitive load

Safety Center

Every safety feature on one screen — nothing hidden

- Night Safety, Silent audio trigger, Trusted watcher
- Health modes: pregnancy, period, medical
- Live toggles — AI mirrors state instantly
- Route-deviation & code-word protection

Live Map

See the ride, share the ride, verify the ride

- Live route with deviation alerts
- One-tap share with trusted contacts
- AI monitors path and warns on anomaly

Trusted Contacts

The people who get called before the police do

- Ranked trusted circle — up to 5 watchers
- SOS auto-dials + shares live location
- AI can notify a specific contact by name

Profile

Verified identity, verified preferences

- ID + face verification status
- Ride history with safety timeline
- Preference: female driver priority

SOS

Countdown, silent trigger, one tap to safety

- 5-second cancellable countdown
- Auto-shares live location + audio
- Notifies all trusted contacts + local response
- Triggerable by button, code-word or AI intent
